1. Original regions

Start Example JOIN-01: two source occurrences and one incoming occurrence, each with its original region/slot.

Middle All three occurrences share distinct shared-mat slots. In a numeral-total variant ask for a response; do not automatically expose/speak the assessed total.

End Undo restores the exact prior occurrence region/slot; separation never creates replacement pieces.

Reduced Motion Immediate reprojected positions and static region focus. No arc, scaling or sequential count reveal.

Ownership An accepted tap/drag/Undo changes persistent region/slot/history or reward ownership exactly once before presentation. Invalid/cancelled input commits nothing. Animation completion only clears ephemeral transforms.

Pending Human art/content/comfort/child-use decisions remain pending. Final layers/pivots and native behavior are unproduced.
