1. Given transfer model

Start Example TAKE-01: five source berries; separate given reference requests two transfers.

Middle Two stable identities are on the friend's plate. Three source identities remain visible; the assessed remainder is unlabelled and unspoken.

End Undo restores exact original source slots. A remainder response is separate from transfer completion/help; no motion callback records either response.

Reduced Motion Immediate positions; static source focus border on remainder question. Zero stays intentionally empty, without a flourish implying a piece.

Ownership An accepted tap/drag/Undo changes persistent region/slot/history or reward ownership exactly once before presentation. Invalid/cancelled input commits nothing. Animation completion only clears ephemeral transforms.

Pending Human art/content/comfort/child-use decisions remain pending. Final layers/pivots and native behavior are unproduced.
