1. Requested cue

Start Committed arrangement and checkpoint evidence unchanged. User requests current-checkpoint cue/model.

Middle Cue focuses the given reference/destination without moving fruit. Requested model highlights actual stable occurrences in order; zero uses an empty-region focus.

End Remove transient cue on finish/cancel. Arrangement unchanged; record delivered cue/model support at the relevant checkpoint when shown, not as a late callback.

Reduced Motion Static focus border and immediate highlight steps at the same support timing. Aligned pose switch without travel, pulse or scaling.

Ownership An accepted tap/drag/Undo changes persistent region/slot/history or reward ownership exactly once before presentation. Invalid/cancelled input commits nothing. Animation completion only clears ephemeral transforms.

Pending Human art/content/comfort/child-use decisions remain pending. Final layers/pivots and native behavior are unproduced.
