No selected illustration pack. No native animation implementation. Silent study.

1. Stable toy placement / bud
2. Bounded rotor / open flower
3. Settled placements; no loop

Start	Free flower available immediately; earned toys/placements come from persisted finite reward ownership. No fabricated seventh reward.
Middle	One accepted placement commits anchor before 220 ms settle. Pinwheel rotor turns once around its hub; flower bud changes to open without a second instance.
End	Stable persistent placements; rotor angle resets modulo one turn. Flower may return to bud on an explicit next tap; Finish remains immediate.
Reduced Motion	Immediate placement; static hub highlight instead of spin; immediate bud/open switch. No rotational, scaling or falling movement.
Ownership	An accepted tap/drag/Undo changes persistent region/slot/history or reward ownership exactly once before presentation. Invalid/cancelled input commits nothing. Animation completion only clears ephemeral transforms.
Pending	Human art/content/comfort/child-use decisions remain pending. Final layers/pivots and native behavior are unproduced.
